ICS BANKS DMS

Document Management System

BANKS

Digitising Document Management

ICS BANKS products are used for rendering banking services and supporting processes through its latest technologies and touchpoints. The solid supporting elements behind ICS BANKS' wide range of touchpoints and latest technologies are the powerful customisation and personalisation tools. Such as an extensive number of parameters, flexible and innovative Business Process Management (BPM), Document Management System (DMS), omnichannel and many more cutting-edge technologies.

One of the challenges that still exist in the banking and financial industry is maintaining paper-based documents. Banks and financial institutions (FIs) are still facing strict regulations and have to handle work the traditional way, such as legal documents that need to be signed by their clients. For example, central banks require banks to maintain clients' signed paper documents and records for a retention period. This is where a systematic approach is essentially needed; to manage, protect and preserve records as evidence of actions.
